Facelift Surgery

Facelift: Enhancement in Life

Facelift, also known as rhytidectomy, is a surgical procedure which improves the signs of facial aging and provides a more youthful appearance. The benefits of the facelift include:

- Improvement in mid and lower face sagging
- Improvement in deep wrinkles along the nose extending to the corner of the mouth
- Remove or reposition excess skin and fat that has fallen or is displaced
- Enhance the appearance of muscle tone loss in the lower face
- Improve the appearance of jowls
- Improve the loose skin and excess fatty deposits under the chin and jaw

The facelift procedure will improve the signs of aging, but will not alter your fundamental appearance or stop the aging process. The procedure may be combined with other procedures such as eyelid surgery (blepharoplasty), forehead lift (brow lift), cheek implants and/or injectables to complement your facial rejuvenation goals. Contact us today to schedule your [Newport Beach facelift](#) appointment.
